

GATS Subscriber Group Meeting Conference Call

May 23, 2013

- Welcome and Introductions
- GATS Status Update
- Status of RPS Regulations
- Recent/Future Enhancements
- Data Validation
 - Generator Registration
 - Generation Entry
- Public Reports
- Subscriber Feedback

- 9068+ GATS subscribers
- 35,736 renewable generators registered in 18 States & DC
- Total Nameplate:

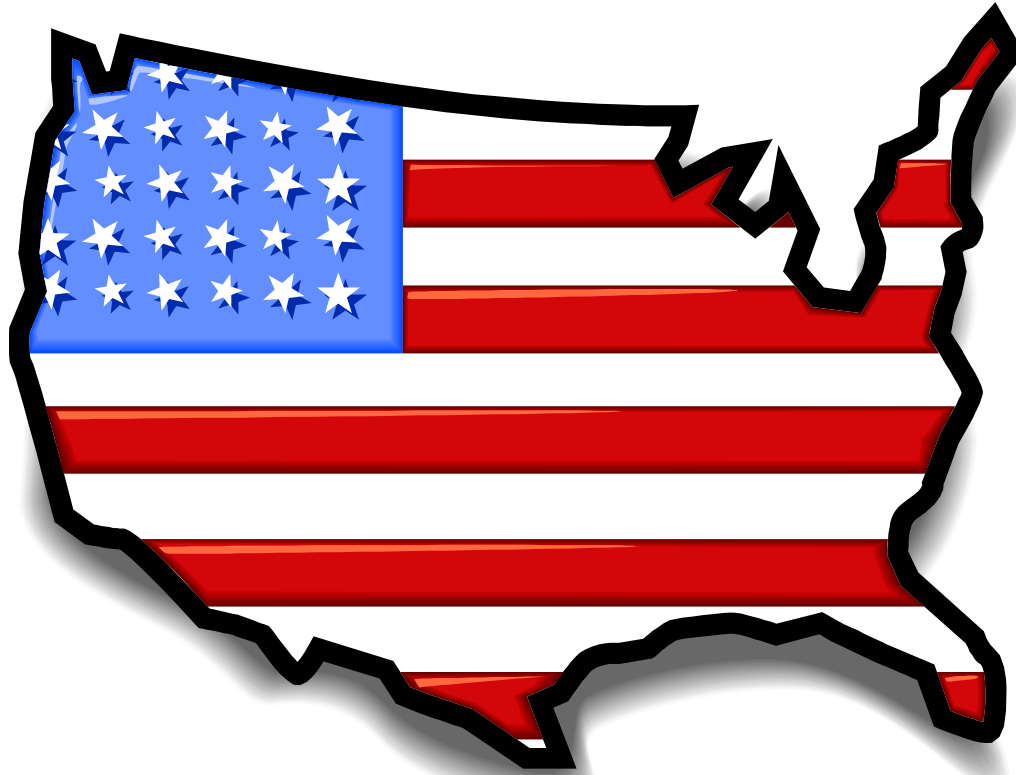

Solar Facilities Registered in GATS

- 34,432 solar PV facilities in 15 states & DC
- 696 solar Thermal facilities in 9 states & DC
- Total solar PV nameplate capability : 1492.97 MW
- Total solar Thermal nameplate capability: 4.24 MW
- Many are residential facilities
- Largest solar PV project registered: 29.1 MW

GATS Misc Monthly Stats

- Average Account Approvals: 140 per month
- Average Generator Approvals: 823 per month
- Average Generator Updates: 227 per month
- Average Calls Answered: 900 per month

- **Generator Registration**
 - ***Generation Entry Type Update***
 - GATS was changed for NJ to allow only meter readings to be the accepted generation entry type
 - GATS stopped creating RECs based on the estimates for all systems certified in NJ as of December 1, 2012
 - ***NJ Non-Compliant Systems*** – GATS will not apply the NJ certification number to system that are flagged as non-compliant until 12 months after the interconnection date
- **Generator Update Screen**
 - Additional validations to prevent initial meter reads to be entered for a period where generation has been processed
- **Generation Entry Screen**
 - Formatting was updated based on subscriber feedback

- Transfer Process
 - GATS will save the last five account you transferred to at the top of the Accounts list
 - Batch Transfers: Multiple pages of RECs can be viewed and selected

f you have

- Reports
 - Public Reports were rewritten in .NET to allow for enhanced capabilities
 - **Voluntary Market Report:** provides information based on RECs retired for the Voluntary Markets
 - **Solar Weighted Average Price Report:** Updated to include data based on the reporting year is a State is selected and to exclude transfers to an EDC for reporting purposes
- Inter-Registry Transfers
 - RECS can now be exported to NC-RETS or MIRECS
- Aggregator Interface
 - RECs can be transferred to another account holder via the interface
- Third Party Reporters
 - TPR notification section now displays the last day of the month that TPR's can enter generation

- **Generation Entry**
 - Updates to allow reporting from multiple meters
 - Solar Thermal data entry in either Btu or kWh
 - Remove Production Estimates for NJ certified systems
- **Streamlined look and feel for Solar Homeowners and Small Commercial Subscribers**
- **Improved Performance on large reports**
- **Updates to the Aggregator and Third Party Interfaces**

Generator Registration

Generation Entry

Subscriber enters generation

- Subscriber gets warning of high generation when entering data.
- System will still allow entry to be saved unless “advised to contact the GATS Admin.”
- If the GATS Admin needs to enter your data, a picture of your meter will be required.

Analysis

- Does generation exceed the production estimate? GATS Administrators analyze production history.
- Reporting dates are considered in analysis of high generation.
- An email is sent to the subscriber asking for data validation. Typically a current picture of the solar meter is an accepted validation.
- Has there been an update to your system size or change in tilt/orientation? A System Change Form and an update should be entered directly into GATS.

Ready for processing

- If a picture is received and validated prior to certificate creation, then we will confirm and process generation.
- If no correspondence is had with the subscriber, the generation is held until validation is received and accepted.
